

# “Manufacturing Time Entry” for Dynamics NAV 2009

**Your Mfg Data is always current and accurate**

**Written in and developed for NAV 2009**

**Works with base NAV Mfg or “Mfg Plus”**

**NAV does not have to be installed on your PC. (DCO License)**

**Easy Installation and Setup**

**Efficient and Accurate Time Allocations to Production Order/Item/Operation**

**Mfg Time for an accurate Clock In and Clock Out Process**

“ Manufacturing Time Entry ” is a special entry screen for employees to enter their own Time per Production Order ’ s Operation.. Once the entry is "Approved ", the time moves to the Output Journal for regular Posting to the Production Order ’ s Capacity Ledger Entries.

After an employee enters or scans their name, the system displays the RPO and Operation he is currently “Clocked in to ”. ( see picture ) The employee could “Clock In ” to a different Task, view his completed entries, Clear the Screen, or Clock Out of the operation by just Clocking In to another operation. This interface is REAL TIME back to the source data, hence eliminating uploads and downloads of current RPO Information. Validation is instant and solid.
